STEP 1 — Setup (Python + VS Code + Folder)

Time: ~10 minutes · Skill needed: none · Kuch bhi pehle se install nahi hona chahiye

> **Is step ka goal:** aapke computer par Python chalne lage, VS Code khul jaye, aur CareFlow folder VS Code me open ho jaye. Bas.

1.1 Python install karna

A. Windows par

1. Browser kholiye aur jaaiye: `https://www.python.org/downloads/`
2. Page par bada yellow button dikhega — **"Download Python 3.x.x"** (jo latest stable version hai, 3.12 ya 3.13). Us par click kijiye. `.exe` file download hogi (jaise `python-3.13.x-amd64.exe`).
3. Downloaded file par double-click kijiye.
4. **SABSE ZAROORI:** installer ke pehle page par neeche do checkbox honge. **"Add python.exe to PATH"** wale ko **zaroor tick kijiye**. Yeh bhool gaye to baad me `python` command nahi chalega.
5. **Install Now** par click kijiye aur finish hone tak wait kijiye.

B. Mac par

1. Jaaiye `https://www.python.org/downloads/` se `.pkg` installer download kijiye, ya
2. Terminal kholiye (Command + Space → "Terminal" → Enter) aur likhiye:

```
brew install python@3.12
```

(Agar Homebrew nahi hai to pehle `https://brew.sh` se install kar lijiye.)

C. Linux (Ubuntu) par

```
sudo apt update
sudo apt install -y python3 python3-pip python3-venv
```

D. Python install hua ya nahi — ye check kijiye

Terminal / Command Prompt kholiye aur ye 2 commands chala dijiye:

```
python --version
pip --version
```

Aisi output aani chahiye:

```
Python 3.12.7
pip 24.2 from /usr/lib/python3/dist-packages/pip (python 3.12)
```

> Agar `python` kaam na kare to Windows par `py --version` try kijiye. Agar `'python' is not recognized` aaye to Python dobara install kijiye aur “Add to PATH” wala checkbox tick kijiye.

1.2 VS Code install karna

1. Jaaiye `https://code.visualstudio.com/`
2. Bada blue **Download** button — apna OS khud detect ho jaata hai. Click kijiye.
3. Installer chalaiye, Next → Next → Install.
4. VS Code kholiye, left side me **Extensions** icon (chaar chhote boxes) par click kijiye.
5. Search kijiye **Python** (Microsoft wala, blue icon) → **Install**.
6. Usi tarah search karke install kijiye: **Pylance**, **Jupyter** (optional), **Rainbow CSV** (CSV file rangeen dikhegi — bahut helpful).

1.3 Project folder ready karna

1. `CareFlow_Project.zip` file ko extract kijiye (right-click → Extract All).
2. Ek `CareFlow` folder milega. Use is jagah move kar dijiye:
   - Windows: `C:\Projects\CareFlow`
   - Mac/Linux: `~/Projects/CareFlow`

> Path me **space**, **Hindi characters** ya bahut lamba naam mat rakhiye. `C:\Users\Yash\Desktop\New folder (2)\CareFlow` — aise path se problems aati hain.

1.4 Folder VS Code me kholna

1. VS Code kholiye.
2. Menu: **File → Open Folder…** (Mac par **File → Open…**)
3. `CareFlow` folder select kijiye → Open.
4. Left side Explorer me `src`, `data`, `dashboard`, `outputs`, `docs`, `run_all.py` dikhne chahiye.

1.5 VS Code ka terminal kholna

1. Menu: **Terminal → New Terminal** (shortcut: `Ctrl + ``)
2. Neeche ek panel khulega. Uski prompt line kuch aisi hogi:

```
C:\Projects\CareFlow>
```

Yaani aap **sahi folder ke andar** hain. Isi terminal me aage saare commands chalenge.

Terminal me folder badalna agar prompt galat folder dikhaye:
`cd C:\Projects\CareFlow` (Windows)
`cd ~/Projects/CareFlow` (Mac / Linux)

1.6 Step 1 verification checklist

Check	Command	Expected
Python installed	`python --version`	Python 3.10+
pip working	`pip --version`	pip 23+
Right folder	`dir` (Windows) / `ls` (Mac)	`run_all.py` aur `src` dikhe
VS Code open	Explorer panel	CareFlow files dikh rahi hain

Sab check pass ho gaya? Aur nahi? Step 2 kholiye — ab dependencies install karenge.
